This document may contain copyrighted materials. These materials have been made available for use in research, teaching, and private study, but may not be used for any commercial purpose. Users may not otherwise copy, reproduce, retransmit, distribute, publish, commercially exploit or otherwise transfer any material.

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specific conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

This institution reserves the right to refuse to accept a copying order if, in its judgment, fulfillment of the order would involve violation of copyright law.

COLD WATER RECHARGE ANALYSIS AT THE
CERRO PRIETO GEOTHERMAL FIELD.

(ANALISIS DE LA RECARGA DE AGUA FRIA EL CAMPO
GEOTERMICO DE CERRO PRIETO)

ABSTRACT.

This paper presents the interpretation of results obtained from the last downhole static pressure and temperature simulated histories in the field. Analysis of the lower temperature water recharge phenomenon from the upper layers of the exploited reservoir shows that the structural system governs the infiltration to the geothermal aquifer.
